PROCEDE DE FABRICATION /MANUFACTURING PROCESS	Après avoir enlevé les vaisseaux sanguins et biliaires, les foies sont salés et épicés. Ils sont ensuite mis dans un cutter avec les autres ingrédients et chauffés. Le mélange est haché sous vide dans la machine. Les boîtes sont remplies avec une doseuse, serties et stérilisées. <i>Foie Gras proceed from Geese which have been examined ante and post mortem veterinary inspection.</i> <i>After having been enervated and gallbladder removed, the livers are salted and spiced. They are then put in a cutter and heated with all other ingredients; The whole mixture is chopped under vaccum in the machine. Tins are filled with a filling machine, sealed and cooked.</i> <i>Then the identification number veterinary control number of the processing establishment and batch number of the product to which the declaration applies are stamped on the lids (or bottom) in indelible ink and that on each tins.</i> <i>Lots are sterilized according to a canning process where the product is heat treated. The water used in cooking and during cooling process is provided by the public net-work of the city of Strasbourg and is in conformity with standards required for drinking water.</i> <i>During all the process the meat products are prepared, handled and stored in a sanitary manner. They are manufactured under conditions that comply with the standard of H.A.C.C.P. The water used in cooking and during cooling process is provided by the public net-work of the city of Strasbourg and is in conformity with standards required for drinking water.</i>
